1. Objective

These basic SQL queries filter, sort and summarize the sample airline data.

2. WHERE: Confirmed Bookings

```
SELECT Booking_ID, Passenger_ID, Flight_ID, Booking_Status\nFROM Booking WHERE
Booking_Status='Confirmed'\nORDER BY Booking_ID;
```

Booking_ID	Passenger_ID	Flight_ID	Booking_Status
5001	1	1001	Confirmed
5002	2	1001	Confirmed
5003	3	1002	Confirmed
5005	5	1003	Confirmed
5006	6	1004	Confirmed

WHERE filters rows and excludes the pending booking.

3. ORDER BY: Sort Flights

```
SELECT Flight_Number, Departure_Time, Status\nFROM Flight ORDER BY Departure_Time ASC;
```

Flight_Number	Departure_Time	Status
AI101	2026-11-01 08:00:00	Scheduled
AI202	2026-11-01 11:00:00	Scheduled
AI303	2026-11-02 16:00:00	Delayed
AI404	2026-11-03 07:30:00	Scheduled

4. GROUP BY and COUNT

```
SELECT Flight_ID, COUNT(*) AS Total_Bookings\nFROM Booking GROUP BY Flight_ID ORDER BY Flight_ID;
```

Flight_ID	Total_Bookings
1001	2
1002	2
1003	1
1004	1

5. HAVING: Flights with 2+ Bookings

```
SELECT Flight_ID, COUNT(*) AS Total_Bookings\nFROM Booking GROUP BY Flight_ID\nHAVING COUNT(*) >= 2;
```

Flight_ID	Total_Bookings
1001	2
1002	2

6. Aggregate Functions

```
SELECT COUNT(*) AS Payment_Count,\n SUM(Amount) AS Total_Amount,\n ROUND(AVG(Amount),2) AS
Average_Amount,\n MIN(Amount) AS Minimum_Amount,\n MAX(Amount) AS Maximum_Amount\nFROM Payment;
```

Payment_Count	Total_Amount	Average_Amount	Minimum_Amount	Maximum_Amount
6	34400.00	5733.33	4500.00	7800.00

SUM and AVG include the pending payment row. For collected revenue, filter Payment_Status='Paid'.

7. Conclusion

The queries demonstrate WHERE, ORDER BY, GROUP BY, HAVING and COUNT, SUM, AVG, MIN and MAX.
